Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-35 are rejected under 35 U.S.C. 103(a) as being unpatentable over Errico et al. (5,575,792) in view of Le Couedic et al. (6,368,320).

With respect to claims 1, 12, 25, 35, Errico et al disclose a multiaxial connection osteosynthesis system for the spine including a bone anchor member (300) having a head (304) a connecting member (250), a connector (400) having a first inwardly deformable housing (402) adapted to receive the head and with a second portion (422) the second portion having a seat (421) adapted to receive the connecting member (400), the first and second portion extending along an axis for clamping the connecting member in the second portion, the system including clamping means (235,330) for clamping the connecting member in the second housing.

Although Errico et al teach of clamping, it is noted that Errico et al did not teach of a connector having a first inwardly deformable portion integral with a second portion and of a clamping means wherein the connector is arranged so that, when the clamping means loads the connecting member in the second housing in the direction of the axis, the connecting member loads the seat to inwardly deform the first portion and immobilize the head therein; as claimed by applicant. However, in a similar art, Le

Couedic et al., evidence the use of such a connector and clamping means, which presses down on the connecting member inwardly deform the first portion and locks the head of the bone anchor therein.

Therefore, given the teaching of Le Couedic et al., it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the connector and clamping means, as taught by Le Couedic et al., in the device of Errico et al to press down on the connecting member and locks the head of the bone anchor.

With respect to claims 2-11, 13-24, 26-34, the above combination of references teaches all the limitations as set forth.

Response to Amendment

Applicant's arguments with respect to claims 1-35 have been considered but are moot in view of the new ground(s) of rejection.

Conclusion

A shortened statutory period for reply to this action is set to expire THREE MONTHS from the mailing date of this action.
